## **EXHIBIT A**

## **CLAIM AMENDMENTS**

## WHAT IS CLAIMED IS:

- 1. (Currently Amended) A method of identifying a candidate beta catenin pathway modulating agent, said method comprising the steps of:
  - (a) providing an assay system comprising a <u>uridine phosphorylase (UP)</u> polypeptide or nucleic acid;
  - (b) contacting the assay system with a <u>candidate</u> test agent under conditions whereby, but for the presence of the test agent, the system provides a reference activity; and
  - (c) detecting a test agent-biased activity of the assay system, wherein a difference between the test agent-biased activity and the reference activity identifies the test agent as a candidate beta catenin pathway modulating agent.
- 2. 7. (Canceled)
- 8. (Original) The method of claim 1 wherein the assay system includes an expression assay comprising a UP nucleic acid and the candidate test agent is a nucleic acid modulator.
- 9. (Original) The method of claim 8 wherein the nucleic acid modulator is an antisense oligomer.
- 10. (Currently Amended) The method of claim 8 wherein the nucleic acid modulator is a <u>phosphothioate morpholino oligomer (PMO)</u>.
- 11. 25. (Canceled)
- 26. (New) The method of claim 8 wherein the nucleic acid modulator is an siRNA.
